Project Title	Credit Card Approval Prediction
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed **Credit Card Approval Prediction** system is designed to improve the efficiency and accuracy of the credit card application process. It addresses the limitations of traditional approval methods by evaluating applicant information and determining eligibility based on predefined criteria. The system helps financial institutions make faster, more consistent, and reliable approval decisions while reducing manual effort. It also enhances customer satisfaction by providing a streamlined application process and timely approval status updates.

Project Overview	
Objective	Develop a Credit Card Approval Prediction system that helps financial institutions evaluate credit card applications efficiently by analyzing applicant information and predicting approval eligibility.
Scope	The project manages the complete credit card application process, including application submission, applicant verification, eligibility evaluation, approval prediction, and status notification.
Problem Statement	
Description	Traditional credit card approval processes are time-consuming and require extensive manual verification, which can lead to delays and inconsistent decisions.
Impact	The proposed solution reduces processing time, improves decision accuracy, enhances customer experience, and supports faster decision-making.
Proposed Solution	
Approach	The system analyzes applicant information such as income, employment status, credit history, and financial details to determine credit card approval eligibility based on predefined criteria.
Key Features	• Online application submission • Applicant verification • Eligibility evaluation • Approval prediction

	• Real-time application status • Secure data storage • Admin dashboard

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Processor required for application development and high execution	Intel Core i5 or higher
Memory	RAM required for smooth system performance	8 GB RAM
Storage	Disk space for data, models, and logs	256 GB SSD or higher
Software		
Frameworks	Framework used for application development	Flask
Libraries	Required Python libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	IDE	Jupyter Notebook, pycharm
Data		
Data	Applicant information used for prediction	Credit Card Approval Dataset (CSV format), Kaggle
